

## AirVenture 2026 Forum - Overview of Oil and Oil Filter Analysis

Oil and Oil Filter Analysis is an important part of overall maintenance, yet is often misunderstood.

There are benefits and limitations with both oil analysis and oil filter analysis, which dictate how and when either, or both, should be used in a maintenance program. This presentation will provide in depth information about how each analysis is done, how the data can be interpreted, and what you should expect from the results of this type of analysis. Both piston and turbine engine owners/maintenance people will benefit from this presentation.

**AMT credit available!**

**To receive AMT credit fill out attendance sheet available at the Forum entrance.**

The FAA Safety Center is centrally located on the EAA AirVenture grounds on the South side of the control tower. We are the large tan building with the rooftop deck facing the runway. Forums entrance is on the west side of the building.
