

Engine Pre-Flight to Shut Down

This seminar examines the correct operation of a piston engine for a variety of aircraft. From pre-flight and start-up, from fuel management during flight, to temperature control in the cylinders and proper shut-down procedures, this presentation will provide valuable insight to owners and pilots alike.

Craig Anderson, Vice-President, and Guy Campolatarra, Engine Shop Foreman of G&N Aircraft, are the featured speakers for this seminar.

This is a one-hour seminar.

Those flying in may park south of the terminal building; linemen will assist with parking aircraft. Those driving in should park in the west lot opposite the terminal building.

The event will be held in the south classroom on the second floor of the terminal building.
