

It Is All About Weather

As aviators here in South Florida the summer months have a dramatic effect on our flying. South Florida has high temperatures, high humidity, and development of thunderstorms and hurricanes. This discussion will focus on the geographical, oceanic, items that contribute to the development of the low-pressure systems in the North Atlantic which may eventually lead to hurricanes. This discussion will also look at how meteorological pressure systems have an effect on the paths of these storms.

If you are on I-95, exit Pembroke Pines Blvd. WEST, then left into Broward College, left in the college, around all the parking lots, till the LAST building, that, would be Number 66. Come in.

A message from the National FAASTeam Manager
